Research

Fundraising for Education: Optimizing Crowdfunding Platforms

Design dynamic assortment policies for crowdfunding platforms to prevent “project starvation” and maximize the value of fully funded campaigns.

with Rad Niazadeh (Chicago Booth)

Optimal Bayesian Online Allocation of Reusable Resources

Generalize classical online resource allocation theory to the reusable setting by developing a time-invariant admission policy that guarantees ex-post feasibility and matches the information-theoretic tight bounds of non-reusable models. [SSRN: 6384158](#)

with Rad Niazadeh (Chicago Booth), Pranav Nuti (Chicago Booth)

Stationary Online Contention Resolution Schemes

Create the S-OCRS framework to unify the design of online selection algorithms, achieving optimal selectability and resolving open problems across various feasibility environments, like matchings and matroids. [SSRN: 6384199](#)

Accepted at EC 2026

Online Job Selection: Reward Rate vs. Remaining Value (formerly Real-Time Personalized Order Holding)

Introduce an online resource allocation framework and index-based policies with theoretical guarantees to optimize the trade-off between keeping an ongoing job to harvest its remaining value vs. preempting it to serve a new request in limited capacity systems. [SSRN: 4644495](#)
